The DR. FISCHER Group - Competence, Innovation, Service

The DR. FISCHER Group is one of the leading The DR. FISCHER Group came in the run during providers of lamps and lights. The various companies of the Group complement each other with their individual specializations and together form a competent, innovative and fair partner for customers and suppliers.

It is especially our structure as a group of specialized, traditional companies which enables us to satisfy the needs and requirements of our customers and provide precise and immediate solutions. Among our greatest strengths are competent advice, customer proximity, professional service and the creation of customized, user-related special applications.

With our constellation of highly competent special lamp manufacturers, our comprehensive portfolio within this sector and the attractive product range of KANDEM Leuchten GmbH for lights and lighting solutions, we offer a large range of products for the professional and general use.

the last 20 years. DR. FISCHER Group is the result of three family owned companies growing together: Speziallampenfabrik DR. FISCHER GmbH and Kandem Leuchten GmbH.

Each individual company, with their specialist fields, is a perfect complement to each other. This makes it possible to fulfill customer's wishes and requirements precisely, quickly and in a solution orientated manner. The greatest strengths of the group are tailor-made special applications and specific all-round solutions.

With sales offices in Europe and Asia, our group is active worldwide. Our product portfolio includes signal lamps for streets, railways, air and waterways; special lamps for medicine and research; household lamps for ovens, cooker hoods and refrigerators; lights and infrared halogen lamps and solutions

Pont à Mousson (France) is the headquarters of DR FISCHER Europe S.A.S., the production center of infrared halogen, high-voltage lamps, halogen and incandescent lamps.

The location at Diez is the main production centre for low-voltage lamps.

DR FISCHER Italy s.r.l. produces special lamps for the domestic field at the Alpignano (Italy) location

Customers are our first priority

DR. FISCHER Group provides you a high quality team able to give you specific know-how in all sectors of lighting industry; from general lighting to professional lighting. DR. FISCHER has three production facilities, all located in Europe. The French factory, headquarters of DR. FISCHER Europe S.A.S enables a commercial and industrial presence with a famous reputation. Our French factory, center of the infrared halogen and high-voltage lamps production has recently taken over the halogen and incandescent commercial activities from Philips. DR. FISCHER lamps' know how is available for all of our customers.

Our worldwide presence and resources make us the ideal partner in the global marketplace. This means we are in a position to support you wherever your location is. DR. FISCHER exports to more than 70 countries all over the world. DR. FISCHER has set up an organization in Pontà-Mousson which will listen to and take into account all kinds of requests and will support our customers by providing advices and dedicated solutions.

Our innovation department has a strong experience on developing any solutions providing our customers a competitive advantage which will support your business. Customers' satisfaction is the priority in DR. FISCHER business ethics.

What we can bring to our customers:

- High-quality products and services
- High performance control systems
- Flexibility and reactivity
- Technological resources and equipment
- Security of Made in Europe
- Professional after-sales service
- Proximity

The Pont à Mousson factory: a wealth of experience in lamp production

The production of lamps started in 1886 in Pagny sur Moselle, France with Mr. Fabius Henrion opening the first workshop of Incandescent Lamps.

Later on, in 1931, the factory joined the FRLE, a group of French lamps factories, hold at 50 % by Philips and at 50 % by the Mazda group. In 1981, the factory moves to Pont à Mousson (10 km away) and became "Philips Eclairage" in 1985.

In 1989, the production of Infrared halogen lamps started in Pont à Mousson with a dedicated area for this new activity. From this time, Philips Eclairage starts developing innovative products like our famous HeLeN range.

On January 1st, 2008 the DR. FISCHER Group took over the incandescent activities of Philips

in Pont à Mousson and founded DR. FISCHER Europe S.A.S. Here special lamps with high voltage technology are produced by using technically highly developed machines. The special lamps with high voltage technology are used by the French Railway, in airports, by the navy, in the medical sector, in laboratories, in photo and optics technology and in many other sensitive areas.

In 2010, DR. FISCHER Europe S.A.S took over the whole site of Philips Pont à Mousson. By this acquisition, we strengthened our halogen production with high speed machines, and we now offer an Infrared and a General Lighting portfolio with marketing, sales and distribution services. This means that one of the biggest centres of competences and production for Special Lighting and General Lighting located between Metz and Nancy.

The recent integration of general activities allows DR. FISCHER Group to get a high level of expertise for lamps, solutions and applications knowledge. These competences are strongly supported by dedicated research and development, quality assurance, production, marketing and sales departments.

An expert team dedicated to quality

Measuring capabilities

٠ Photometry:

- photometry measurements in spheres -
- -Lamps are measured with DC supply 600V maximum and 10 kW maximum
- _ Flux and color temperature are measured in the same time
- Sofware for data _
- The departement has a large capacity to test the lamps on life:
 - Burning frames and luminaires
 - Switched cycle (on-off)
 - -Position (horizontal, vertical, caps up, caps down etc.)
 - Software for data _

٠ Different measurements are available on the site as:

- Temperature
- Spectroradiometry
- Irradiance : X-Y measurements
- Material reflectivity & Material transmission
- Scan Electronic Microscopy / EDAX
- Tensile strengh measurements
- Dimensional measurement (3D measuring unit): Mitutoyo B706

• High Quality products:

- High quality component
- Experience and know how
- Control in production thanks to Statistical Process Control
- Lean Manufacturing
- Certifications: ٠
 - ISO 9001 and 14001 certified
 - CE certificates are available on request

Measurement systems: Photometry department measures luminous flux and all other features of lamps as lamp current, color temperature etc.

Mitutoyo B706

Environment

Environment means a lot to us

contain any hazardous substances that impact the environment (RoHS compliant)

As a company that belongs to the electronics industry, we have a direct responsibility to ensure sustained ecological development. The more energy-efficient our products become, the better it is for the environment and the climate. For this reason we consider ecological aspects right from yield, but also the product life. This is both an the development stage.

We plan, develop, manufacture and sell our products in such a way that the environment is pro-

No recycling is needed as Halogen lamps do not tected and natural resources spared. We pay a particular attention to the use of raw materials, energy balance between production, planning of the environmentally friendly recycling of our products, administration and sales.

> Special lamps are our core competence. We continue making successful efforts to increase energy efficiency. This not only includes a direct light ecological and an economic argument in terms of quality and competition especially with lamps that must reliably work under heavy conditions.

Halogen introduction

Halogen lamps are built with a high quality tungsten coil which is embedded in a quartz tube filled with inert gas and halogen components. They are equipped with built-in arc-preventing fuses and the filament is fixed in the quartz tube by indents. This brings high luminous efficacy and crisp white lights close to day, excellent color rendering, constant light output during its life, immediate start and restart, dimmable.

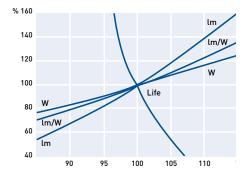

Halogen lamps are composed of quartz which improves the security. Besides, they do not pollute the environment. Indeed, they do not contain mercury or lead. They do not emit electromagnetic waves and require no recycling.

These lamps offer an excellent color rendering and light close to daylight. The dimming is always possible on halogen lamps.

They have the characteristic of increasing the enhancer of objects and showcases as shop window. Halogen lamps are used for commercial lighting, scientific and industrial lighting as well as residential lighting.

Double envelope halogen lamps used in open luminaries are permitted indoors. In outdoor applications a protective glass cover should be used and the lamp should be fitted in a water resistant luminary. The use of a shorter burner gives the opportunity to reduce the length making Halogen

The relationship between lamp voltage and other lamp operating parameters:

We can notice that 5 % overvoltage reduces the lamp-life by half

FeaturesBenefitsExcellence flux maintenanceHigh quality of light even at end of lifeImmediate start and restartLight available at any timeDimmabilityOutput accurately controllable from 0 to 100% to match your needsHigh color temperatureExcellent color rendering and high quality of light : a crisp white light close to day lightNo pollutionNo recyclingLong lifetimeLow maintenanceCompactnessAllows designs of compact lighting luminaries

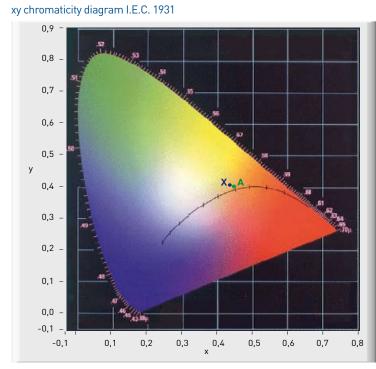

completely in line with GLS bulb dimensions. They are also well-fitted for outdoor lighting because they withstand very low temperature.

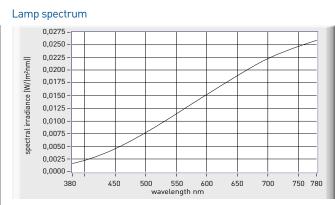

Applications:

homes, offices, hotels, restaurants, museum, shops, building illumination etc.

Halogen lamps for general applications

The maximum permissible temperature is 350°C Halogen R7s 118 mm for the pinch and 900° C for the bulb (minimum 250°C).

Exceeding these temperatures will influence lifetime negatively.

These linear lamps are belonging to the halogen technology in main voltage with a coiled filament. It ensures a real safe use and a good shock resistance thanks to its reinforced filament design. This technology brings white and brilliant light and a long lifetime of 2000 hours. Our products are well fitted for universal position thanks to the dimple technology. The arc-preventing fuses enable a great safety.

They are well-adapted for any applications requiring an excellent colour rendering and a constant light output. All lamps can be used with a dimmer.

This model of lamp is typically used in shop lighting applications and for an indirect light. This lamp is used for professional appliances. People can exploit it for outdoor such as in parking lots, billboards or construction sites and for all other needs of security lightings.

Halogen R7s 78 mm

This product is a main-voltage linear lamp giving white light such as the halogen 118 mm lamps. This compact model has the same benefits: a bright light and a long lifetime. It is a high-efficacy lamp with a clear tubular quartz bulb. We ensure a maximum of safety and shocks resistance thanks to reinforced filament supports. They guarantee a great safety with two arc-preventing fuses and have an excellent colour rendering, a constant light output during life and dimmability.

This lamp has all the advantages of the halogen R7s 118 mm in only 78 mm.

Characteristics of 118 mm and 78 mm halogen lamps:

Features	Benefits						
Double-ended high-efficacy lamps	• 20% more light than ordinary double-ended halogen lamps						
Clear tubular quartz bulb	Long lifetime						
 Reinforced filament supports for maximum safety and shocks resistance resulting in longer lifetime 	Bright halogen light						
• Two arc-preventing fuses for greater safety							

- Excellent colour rendering during life
 - Constant light output life

General applications

Large flood

This product is a main-voltage linear lamp with a single coiled filament, giving white light. These characteristics enable a long lifetime. Indeed, our lamps lifetime is 2000 hours. Our lamps are made with a double-ended clear tubular quartz bulb.

Of course, as all of our lamps, they have an excellent colour rendering and a constant output during life.

Large flood is typically used in outdoor applications for billboards, car parks, security lighting, building illumination, garden lighting, construction sites and warehouses.

Halogen double envelope

DR. FISCHER halogen double envelope lamp has a high-wattage giving a white bright light. This lamp is a heavy duty product thanks to its very robust construction. It is made of a quartz burner with a linear tungsten filament in a single-ended thermal-shock-resistant so it is well-fitted for floodlighting installations. This lamp has a clear glass tubular envelope, provides a high luminous efficacy and an excellent color rendering.

These halogen lamps are well-fitted for a wide range of applications like outdoor floodlighting such as sport grounds, parking, building sites, harbors, temporary events, rescue lighting and airport aprons. This lamp is also used in indoor applications such as public halls, factories, sport halls, etc.

General applications

Capsule B15d Energy Saving

DR. FISCHER B15d lamp is a single-ended and a main-voltage capsule with a B15d base. They are ideal for use in small, lightweight and modern luminaries. B15d lamps can be installed in place of incandescent lamps. They require no transformer for operation. It is available with clear restaurants for instance. glass and in various wattages. This lamp offers an excellent color rendering with crisp halogen lighting and a constant light output during life. It is dimmable. This lamp is fully recyclable so is

environmentally friendly. Thus, B15d are available with energy saving capabilities. B15d serve for various applications to accent lighting in shops in order to emphasize products in shelves. B15d are installed in spot and illuminate homes, hotels and

- Available with clear glass
- Available in wattages 53W, 70W, 105W •
- Excellent color rendering •
- Crisp halogen lighting
- Constant light output during life

General applications

Incandescent lamps for general applications

Incandescent lamps are light sources found in Striplite (Linolite) countless applications. These lamps provide specific light qualities which suit with specific and general applications.

A Striplite is a double-ended lamp with a linear shape. It's one of the most popular luminary for bathroom or kitchen applications. There is a large choice of bulb finish that enables us to select the lighting intensity. We can select a frosted glass for soft lighting; prefer opaque color for diffused lighting or choose a clear bulb to get a brilliant aspect.

Striplite is used to light displays, mirrors, kitchens, bars and other similar spaces.

Striplite (Linolite)

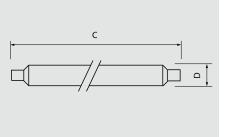

Striplites have an average lifetime of 1000 hours. They can be used in any burning position.

Specific applications

Incandescent lamps for specific applications

Incandescent lamps are the most familiar light Nightlight source we find in countless applications. These lamps provide specific light qualities that suit with specific applications.

Incandescent lamps are very appreciated by professionals. They are mature products which are sold worldwide since tens of decades when Thomas Edison invented them.

Incandescent lamps are easy to use and very friendly products. They offer a competitive solution for any kinds of applications. Professional can change their lamps without damaging luminaries.

Moreover, Incandescent lamps require no recycling because they do not contain any dangerous substances for the environment.

These lamps are very used for string of fairy light decorating houses and a lot of spaces during special events and parties such as the Season's Greetings. They can be used indoor as well as outdoor. Of course, these lamps can be utilized for all night light applications.

Spherical lamps

• Low voltage Lamp (TBV))

TBV are low voltage lamps of 24V. This characteristic enables to use this lamp in all spaces requiring low voltage input such as machine tools, bathrooms or safety equipments.

• Reinforced Construction Lamp (CR)

Reinforced construction lamps are shock resistant. So, they can be settled in unstable environments like boats, mines and all other environments which withstand bad weather conditions. These lamps have proven heavy duty features in extreme conditions. Indeed, reinforced construction lamps have exceptionally strong filaments to withstand mechanical shocks and vibrations.

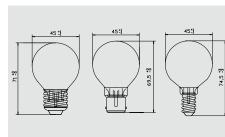

Nightlight

Nightlight has an average life of 2000 hours and can be used in any burning position.

Applications

- Corridors, halls, staircases, nurseries etc.
- Homes, hotels, offices, public buildings, garages etc.

Lighting European Regulation and logos

Lighting European Regulation

In December 2008, the European Directive 2005/32/EC has listed measures to reduce CO2 emissions, notably through more efficient lighting, in order to reduce energy consumption.

It came under a regulation for domestic lighting. A timetable for phasing applies from 1 September 2009 incandescent lamps according to Powers. Incandescent lamps for domestic use will disappear from the market altogether in September 2016.

Halogen lamps rated less than 500 watts of class D, E, F or G will no longer be allowed on the European domestic market.

How to evaluate the energy efficiency of a lamp?

The energy efficiency of a lamp is calculated by the ratio between power consumption (Watt) and the amount of light emitted (Lumen)

Where can I find information on energy efficiency?

This information is available in the ranking energy that must be communicated very clearly to the consumer. Class A includes the most efficient lamps whereas class G pertains to more energy consumption lamps. The regulation also requires that the amount of light expressed in lumens is clearly visible on the packaging for the consumer.

All lamps making mention of the logo "Non Household" are not authorized for sale to domestic lighting.

Our products adapt to all your applications in professional and domestic applications outside Europe. You can find our range through the answers to your specific requests.

Logos description

Preferably do not touch quartz with bare hands. If grease or chemical compound have been deposited on quartz, simply clean before lighting with cloth moistened with alcohol.

Disconnect installation from power supply before removing or installing a lamp.

Non Household
